

Imagine

Imagine

Imagine

A pandoc filter to turn fenced codeblocks into graphics or ascii art by wrapping some external command line utilities, such as:

```
actdiag, asy, asymptote, blockdiag, boxes, circo, ctioga2, ditaa, dot,
fdp, figlet, flydraw, gle, gnuplot, graph, graphviz, gri, imagine,
mermaid, mscgen, neato, nwdiag, octave, packetdiag, pic, pic2plot,
plantuml, plot, ploticus, protocol, pyxplot, rackdiag, seqdiag, sfdp,
shebang, twopi
```

Installation

```
% sudo pip install pandoc-imagine

or simply save `pandoc-imagine.py` anywhere along $PATH
```

Dependencies

```
% sudo pip install pandocfilters

and one (or more) of the packages that provide above utilities.
```

Pandoc usage

```
% pandoc --filter pandoc-imagine.py document.md -o document.pdf
```

Markdown usage

```
```cmd
```

```
code
```
```

which will run ``cmd`` (if known) to process the ``code`` into a png image and replaces the fenced code block with an Image in a paragraph of its own or any ascii art in its own CodeBlock.

Alternate, longer form:

```
```{.cmd options=".." im_out=".." prog=<other-cmd>}
code
```
```

- options=".." will be passed onto the command line.
Some classes already provide some defaults (as required by the command).
- im_out="..", csv-list of keywords each specifying a certain output
 - img image in a paragraph
 - fcb codeblock (class fcb) containing the original codeblock
 - stdout, codeblock (class stdout) containing stdout output (if any)
 - stderr, codeblock (class stderr) containing stderr output (if any)
- prog=<other-cmd>, overrides class-to-command map.
Only useful if ``cmd`` itself is not an appropriate class in your document.

If the command fails, the original fenced code block is retained unchanged. Any info on stderr is relayed by Image, which might be useful for troubleshooting.

If the command succeeds but produces no image, a line reporting the missing image is included in the output document.

Notes:

- filenames are based on a hash of the codeblock + its attributes
- uses subdir ``pd-images`` to store any input/output files
- there's no clean up of files stored there
- if an output filename exists, it is not regenerated but simply linked to.
- ``packetdiag`` & ``sfdp``'s underlying libraries seem to have some problems.

Some commands follow a slightly different pattern:

- 'img' directive is ignored by commands that only produce ascii
- ctioga2 defaults to pdf instead of png
- flydraw produces a gif, not png
- gle also creates a .gle subdir inside the images-dir
- gri produces a ps, which is ``convert``ed to png
- imagine reads its code as help-topics, returns codeblocks with help-info

- plot reads its codeblock as the relative path to the file to process
- pyxplot will have ``set terminal`` & ``set output`` prepended to its ``code``
- shebang runs its codeblock as a script with `<fname>.png` as its argument.
 - use `{.shebang im_out="stdout"}` for text instead of an png

Security

Imagine just hands the fenced codeblocks to plotting tools to process or simply runs them as system scripts, as-is.

Shebang's are inherently unsafe and most of the plotting tools implement their own 'little' languages, which can create beautiful images, but can also cause harm.

There is no way to check for 'side effects' in advance, so make sure to check the fenced codeblocks before running them through the filter.

Imagine class

The imagine class puts documentation of topics at your fingertips, like so:

```
```imagine
class
```
```

Use ``imagine`` as class to get the module's docstring (ie this text) and/or one or more of the commands you're interested in, each on a separate line.

Noop's

Only codeblocks with one of Imagine's classes will be recognized and processed.

Anonymous CodeBlock

Anonymous codeblocks are not processed.

This code block is anonymous and not processed by Imagine.

A Python CodeBlock

Neither is a python codeblock processed.

```
if processed_by(Imagine):
    raise Expectation('Not ignored by Imagine!')
else:
    print "Great, if you're reading this, it passed through Imagine unharmed"
```

Asymptote

asy

```
sudo-apt-get install asymptote
http://asymptote.sourceforge.net/

asy -o <fname>.png [options] <fname>.asy
```

Notes:

- eps formatted images don't go well together with pandoc.

a plot

```
```{.asy im_out="fcb,img" caption="Created by Asymptote"}
settings.outformat="png";
settings.prc=false;
settings.render=0;
import three;
size(6cm,0);
draw(0--2X ^^ 0--2Y ^^ 0--2Z);
triple circleCenter = (Y+Z)/sqrt(2) + X;
path3 mycircle = circle(c=circleCenter, r=1, normal=Y+Z);
draw(plane(0=sqrt(2)*Z, 2X, 2*unit(Y-Z)), gray + 0.1cyan);
draw(mycircle, blue);
draw(shift(circleCenter) * (0 -- Y+Z), green, arrow=Arrow3());
```
```

a sphere

```
```{.asy im_out="fcb,img" caption="Created by Asymptote"}
settings.outformat="png";
settings.prc=false;
```

Figure 1: Created by Asymptote

```
settings.render=0;

path3 myarc = rotate(18,Z) * Arc(c=0, normal=X, v1=-Z, v2=Z, n=10);
surface backHemisphere = surface(myarc, angle1=0, angle2=180, c=0, axis=Z, n=10);
surface frontHemisphere = surface(myarc, angle1=180, angle2=360, c=0, axis=Z, n=10);
draw(backHemisphere, surfacepen=material(white+opacity(0.8), ambientpen=white), meshpen=gray);
draw(0--X, blue+linewidth(1pt));
...
```

## ***blockdiag site:***

### **blockdiag command**

```
```{.blockdiag im_prg="blockdiag" im_out="fcb,img" width="100%" caption="Created by Blockdiag"}
blockdiag {
  // standard node shapes
  box [shape = "box"];
  roundedbox [shape = "roundedbox"];
  diamond [shape = "diamond"];
  ellipse [shape = "ellipse"];
  note [shape = "note"];
  cloud [shape = "cloud"];
  mail [shape = "mail"];
  beginpoint [shape = "beginpoint"];
  endpoint [shape = "endpoint"];
  minidiamond [shape = "minidiamond"];
  actor [shape = "actor"];
}
```

Figure 2: Created by Asymptote

```
dots [shape = "dots"];
box -> roundedbox -> diamond -> ellipse;
cloud -> note -> mail -> actor;
minidiamond -> beginpoint -> endpoint -> dots;
// node shapes for flowcharts
condition [shape = "flowchart.condition"];
database [shape = "flowchart.database"];
input [shape = "flowchart.input"];
loopin [shape = "flowchart.loopin"];
loopout [shape = "flowchart.loopout"];
terminator [shape = "flowchart.terminator"];
condition -> database -> terminator -> input;
loopin -> loopout;
}
...
```

seqdiag

```
```{.seqdiag im_out="fcb,img" width="80%" height="50%" caption="Created by seqdiag"}
{
browser -> webserver [label = "GET /index.html"];
browser <-- webserver;
```

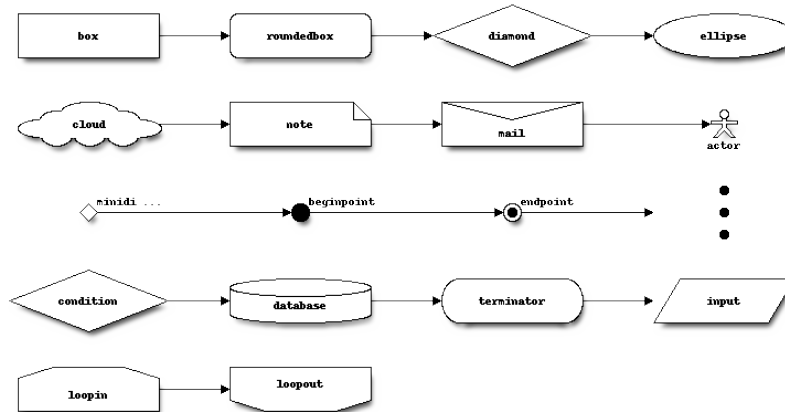

Figure 3: Created by Blockdiag

```

browser -> webserver [label = "POST /blog/comment"];
webserver -> database [label = "INSERT comment"];
webserver <- database;
browser <- webserver;
}
...

```

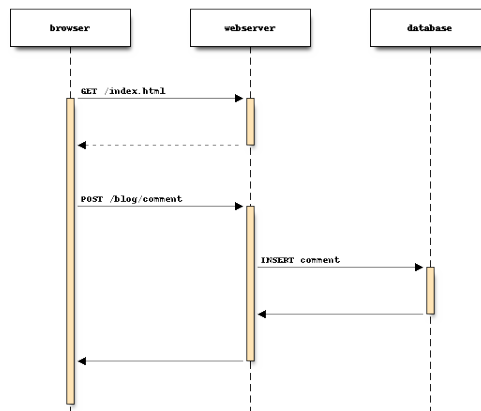

Figure 4: Created by seqdiag

## nwdiag

```

```{.nwdiag im_out="fcb,img" caption="Created by nwdiag"}
{
  network dmz {
    address = "210.x.x.x/24"

    web01 [address = "210.x.x.1"];
    web02 [address = "210.x.x.2"];
  }
  network internal {
    address = "172.x.x.x/24";

    web01 [address = "172.x.x.1"];
    web02 [address = "172.x.x.2"];
    db01;
    db02;
  }
}
```

```

Figure 5: Created by nwdiag

## actdiag

```

```{.actdiag im_out="fcb,img" height="60%" caption="Created by actdiag"}
{

```

```

A -> B -> C -> D;

lane foo {
  A; B;
}
lane bar {
  C; D;
}
}
...

```

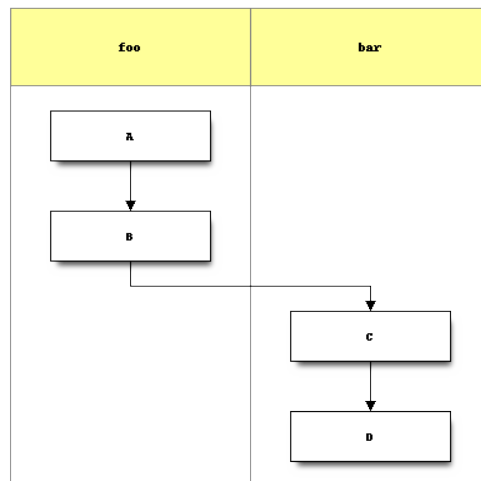

Figure 6: Created by actdiag

rackdiag

```

```{.rackdiag im_out="fcb,img" height="80%" caption="Created by rackdiag"}
{
 // define 1st rack
 rack {
 16U;

 // define rack items
 1: UPS [2U];
 3: DB Server
 4: Web Server
 5: Web Server

```

```

 6: Web Server
 7: Load Balancer
 8: L3 Switch
 }

 // define 2nd rack
 rack {
 12U;

 // define rack items
 1: UPS [2U];
 3: DB Server
 4: Web Server
 5: Web Server
 6: Web Server
 7: Load Balancer
 8: L3 Switch
 }
}
...

```

Figure 7: Created by rackdiag

## packetdiag

Unfortunately, packetdiag doesn't work properly due to a problem with some library:

```
Imagine:BlockDiag: packetdiag -> ERROR: images do not match
{
 colwidth = 32
 node_height = 72

 0-15: Source Port
 16-31: Destination Port
 32-63: Sequence Number
 64-95: Acknowledgment Number
 96-99: Data Offset
 100-105: Reserved
 106: URG [rotate = 270]
 107: ACK [rotate = 270]
 108: PSH [rotate = 270]
 109: RST [rotate = 270]
 110: SYN [rotate = 270]
 111: FIN [rotate = 270]
 112-127: Window
 128-143: Checksum
 144-159: Urgent Pointer
 160-191: (Options and Padding)
 192-223: data [colheight = 3]
}
```

*boxes*

boxes Boxes is a command line program that draws a box around its input text. It can remove and repair those boxes, too.

design ‘peek’

```

```{.boxes im_opt="-d peek -a c -s 40x3" im_out="fcb,stdout" caption="boxes"}
boxes
```

/* _\|/_

*GRI*

### Single plot

With the following in `gri-01.dat`

1	8	11	9
2	22	21	20
3	11	10	9
4	20	15	10

plot the first two columns like so:

```

```{.gri im_out="fcb,img" caption="Created by Gri"}
open dta/gri-01.dat
read columns x y
draw curve
draw title "http://gri.sf.net"
```

```

<http://gri.sf.net>

Figure 27: Created by Gri

## Multiple curves

```
```{.gri im_out="fcb,img" caption="Created by Gri"}
`draw curves' \xname \yname ...``
Draw multiple y columns versus an x column. Assumes
that the datafile is open, and that x is in the first
column, with the y values in one or more following
columns.
```

The number of columns is figured out from the options,
as is the name of the x-axis, and the labels to be
used on each of the y curves.

```
{
  # NB. the 3 below lets us skip the words 'draw'
  # and 'curves', and the name of the x-column.
  .num_of_y_columns. = {rpn wordc 3 -}
  if {rpn .num_of_y_columns. 1 >}
    show "ERROR: 'draw curves' needs at least 1 y column!"
    quit
  end if

  set x name {rpn 2 wordv}
  set y name ""

  # Loop through the columns.
  .col. = 0
  while {rpn .num_of_y_columns. .col. <}
    # The x-values will be in column 1, with y-values
    # in columns 2, 3, ..., of the file.
    .ycol. = {rpn .col. 2 +}
    rewind
    read columns x=1 y=.ycol.
    # At this point, you may want to change line thickness,
    # thickness, color, dash-type, etc. For illustration,
    # let's set dash type to the column number.
    set dash .col.
    draw curve
    draw label for last curve {rpn .col. 3 + wordv}
    .col. += 1
  end while
}
```

```
open dta/gri-01.dat
draw curves time y1 y2 y3 y4
```

## Octave

Hints for using Octave as batch processor:

- ; makes statements silent

- `figure(1, "visibility", "off")` prevents pop-up window
- `print(1, argv(){1});` prints to intended output filename
- octave will infer image type from output filename extension
- `imagine` calls `octave --no-gui -q <im_opt> <infile> <outfile>`, where
  - `<im_opt>` come from `im_opt="."` in the fenced code blocks attributes
  - `<infile>` is `pd-images/hashed-name.octave` containing the code text
  - `<outfile>` is `pd-images/hashed-name.png` by default

## Sinus plot

```

```{.octave im_out="fcb,img" caption="Created by Octave"}
outname = argv(){1}
figure(1, 'visible', 'off');

x = 0:0.01:2*pi;
a = sin(x);
b = cos(2*x);
c = sin(4*x);
d = 2*sin(3*x);
plot(x,a,x,b,x,c,x,d, "linewidth", 2);
set(gca, "xlim", [0,2*pi], "fontsize", 15);
title("sinusoids");

print(1, outname, '-dpng');
```

```

## Peaks surface

Figure 41: Created by Ploticus

## *Plotutils site*

It includes:

- GNU *graph*, which plots 2-D datasets or data streams in real time.

- GNU *plot*, which translates GNU Metafile format to any of the other formats.
- GNU *tek2plot*, for translating legacy Tektronix data to any of the above formats.
- GNU *pic2plot*, for translating the pic language (a scripting language for designing box-and-arrow diagrams) to any of the above formats. The pic language was designed at Bell Labs as an enhancement to the troff text formatter.
- GNU *plotfont*, for displaying character maps of the fonts that are available in the above formats.
- GNU *spline*, which does spline interpolation of data. It normally uses either cubic spline interpolation or exponential splines in tension, but it can function as a real-time filter under some circumstances.
- GNU *ode*, which numerically integrates a system consisting of one or more ordinary differential equations.

Note:

- Imagine only wraps *plot* and *pic2plot* (*pic* is an alias for *pic2plot*).

## graph

Each invocation of *graph* reads one or more datasets from files named on the command line or from standard input, and prepares a plot. There are many command-line options for adjusting the visual appearance of the plot. The following sections explain how to use the most frequently used options, by giving examples.

```
```{.graph im_opt="-X x-axis -Y y-axis -f 0.1 --bitmap-size 200x200" im_out="fcb,img" capti
0.0  0.0
1.0  0.2
2.0  0.0
3.0  0.4
4.0  0.2
5.0  0.6
```
```

## plot

The GNU *plot* filter displays GNU graphics metafiles or translates them to other formats. It will take input from files specified on the command line or from standard input. The *-T* option is used to specify the desired output format. Supported output formats include “X”, “png”, “pnm”, “gif”, “svg”, “ai”, “ps”, “cgm”, “fig”, “pcl”, “hpgl”, “regis”, “tek”, and “meta” (the default).

Figure 42: PlotUtil's graph

The metafile format is a device-independent format for storage of vector graphics. By default, it is a binary rather than a human-readable format (see Metafiles). Each of the `graph`, `pic2plot`, `tek2plot`, and `plotfont` utilities will write a graphics metafile to standard output if no `'-T'` option is specified on its command line. The GNU libplot graphics library may also be used to produce metafiles. Metafiles may contain arbitrarily many pages of graphics, but each metafile produced by `graph` contains only a single page.

`plot`, like the metafile format itself, is useful if you wish to preserve a vector graphics file, and display or edit it with more than one drawing editor.

```
```{.plot im_opt="--bitmap-size 300x200" im_out="fcb,img" caption="Created by plot"}
dta/input.meta
```
```

## pic2plot

*From the gnu website:*

The `pic` language is a ‘little language’ that was developed at Bell Laboratories for creating box-and-arrow diagrams of the kind frequently found in technical papers and textbooks. A directory containing documentation on the `pic` language is distributed along with the plotting utilities. On most systems it is installed as `/usr/share/pic2plot` or `/usr/local/share/pic2plot`. The directory includes Brian Kernighan’s original technical report on the language, Eric S. Raymond’s tutorial

Figure 43: Created by plot

on the GNU implementation, and some sample pic macros contributed by the late W. Richard Stevens.

## ***Protocol:***

Protocol is a simple command-line tool that serves two purposes:

- Provide a simple way for engineers to have a look at standard network protocol headers, directly from the command-line, without having to google for the relevant RFC or for ugly header image diagrams.
- Provide a way for researchers and engineers to quickly generate ASCII RFC-like header diagrams for their own custom protocols.

## **TCP Header**

```

```{.protocol im_out="fcb,stdout" caption="protocol"}
tcp
```

```

| Source Port |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   | Destination Port |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
|-------------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|------------------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

set ytics 3*pi ; set mytics pi
set ztics
set key below
set size 6 square
set grid
plot 3d [-6*pi:6*pi][-6*pi:6*pi][-0.3:1] sinc(hypot(x,y)) \

```

```

with surface col black \
fillcol hsb(atan2($1,$2)/(2*pi)+0.5,hypot($1,$2)/30+0.2,$3*0.5+0.5)
...

```

Figure 45: Created by PyxPlot

SheBang

The `image` filter also features the `shebang` class which will run the fenced code block as a system script.

`shebang`

```
http://www.google.com/search?q=shebang+line
```

```
<fname>.shebang [options] <fname>.png
```

bash

```
```{.shebang im_out="fcb,stdout,img"}
#!/bin/bash
echo "This script is saved as :" $0
echo "and requires boxes to be available"
echo
echo "Its (user) executable flag is set:"
echo
echo $(ls -lpah $0 | tr -s ' ' | cut -d' ' -f1,9) | boxes -d peek
echo
echo "This script won't produce: $1"
echo
echo "But since 'im_out'-option above includes a request for img,"
echo "a line is included in the output document, like:"
echo
echo "?? missing ${1}"
echo
echo "If a shebang script returns with an exit code other than 0 (zero)"
echo "the command fails and the original code block is retained"
echo
echo "If im_out=".." includes 'stdout' (like in this case), any text"
echo "on stdout is included in its own CodeBlock"
```
```

This script is saved as : pd-images/d04c1277e20e318d7e3ba89cbb52e1fb52f4efc7.shebang
and requires boxes to be available

Its (user) executable flag is set:

```
/*      _\|/_
      (o o)
+----o00-{_}-00o-----+
|-rwxrw-r-- pd-images/d04c1277e20e318d7e3ba89cbb52e1fb52f4efc7.shebang|
+-----*/
```

This script won't produce: pd-images/d04c1277e20e318d7e3ba89cbb52e1fb52f4efc7.png

But since 'im_out'-option above includes a request for img,
a line is included in the output document, like:

?? missing pd-images/d04c1277e20e318d7e3ba89cbb52e1fb52f4efc7.png

If a shebang script returns with an exit code other than 0 (zero)
the command fails and the original code block is retained

If `im_out=..` includes `'stdout'` (like in this case), any text on `stdout` is included in its own `CodeBlock`

?? missing `pd-images/d04c1277e20e318d7e3ba89cbb52e1fb52f4efc7.png`

manpage

```
```{.shebang im_out="fcb,stdout"}
#!/bin/bash
MANWIDTH=85 man 6 figlist | col -bx | iconv -t ascii//TRANSLIT
```
```

FIGLIST(6) Games Manual FIGLIST(6)

NAME

`figlist` - lists figlet fonts and control files

SYNOPSIS

`figlist [-d directory]`

DESCRIPTION

Lists all fonts and control files in figlet's default font directory.
Replaces "`figlet -F`", which was removed from figlet version 2.1.

EXAMPLES

To use `figlist` with its default settings, simply type

```
example% figlist
```

To list all the font and control files in `/usr/share/fonts/figlet`

```
example% figlist -d /usr/share/fonts/figlet
```

AUTHORS

`figlist` was written by Glenn Chappell <ggc@uiuc.edu>

This manual page was written by Jonathon Abbott for the Debian Project.
