Metadata options

image.im_out: img, fcb

image.im_log: 4

Notes:

- pip3 search pychartdir came up dry ..., so
- download appropriate zip-file @ <https://www.advsofteng.com/download.html>
- cd download-dir
- tar xvzf chardir_...._.tar.gz
- cd ChartDirector
- read documenation -> xdg-open doc/cdpython.htm
- mkdir -p ~/lib/python
- cp -R lib/* ~/lib/python
- add ~/lib/python to your PYTHONPATH
- python script, save output to filename given by `sys.argv[-1]`
- image format should match `im_fmt` used to create a link to the image.

ChartDirector

The yellow bars in the images created by ChartDirector are because this is the demo-version without a license.

## Scatter group (pdf)

```
#!/usr/bin/env python
import sys # required in order to pickup filename from sys.argv
from pychartdir import *

The random XYZ data for the first 3D scatter group
r0 = RanSeries(7)
xData0 = r0.getSeries2(100, 100, -10, 10)
yData0 = r0.getSeries2(100, 0, 0, 20)
zData0 = r0.getSeries2(100, 100, -10, 10)

The random XYZ data for the second 3D scatter group
r1 = RanSeries(4)
xData1 = r1.getSeries2(100, 100, -10, 10)
yData1 = r1.getSeries2(100, 0, 0, 20)
zData1 = r1.getSeries2(100, 100, -10, 10)

The random XYZ data for the third 3D scatter group
r2 = RanSeries(8)
xData2 = r2.getSeries2(100, 100, -10, 10)
yData2 = r2.getSeries2(100, 0, 0, 20)
zData2 = r2.getSeries2(100, 100, -10, 10)

Create a ThreeDScatterChart object of size 800 x 520 pixels
c = ThreeDScatterChart(800, 520)
c.enableVectorOutput() # tst

Add a title to the chart using 20 points Times New Roman Italic font
c.addTitle("3D Scatter Groups", "timesi.ttf", 20)

Set the center of the plot region at (350, 240), and set width x depth x height to 360 x 360 x 270 pixels
c.setPlotRegion(350, 240, 360, 360, 270)

Set the elevation and rotation angles to 15 and 30 degrees
c.setViewAngle(15, 30)

Add a legend box at (640, 180)
c.addLegend(640, 180)

Add 3 scatter groups to the chart with 9 pixels glass sphere symbols of red (ff0000), green (00ff00) and blue (0000ff) colors
c.addScatterGroup(xData0, yData0, zData0, "Alpha", GlassSphere2Shape, 9, 0xff0000)
c.addScatterGroup(xData1, yData1, zData1, "Beta", GlassSphere2Shape, 9, 0x00ff00)
```

```
c.addScatterGroup(xData2, yData2, zData2, "Gamma", GlassSphere2Shape, 9, 0x0000ff)

Set the x, y and z axis titles
c.xAxis().setTitle("X-Axis Place Holder")
c.yAxis().setTitle("Y-Axis Place Holder")
c.zAxis().setTitle("Z-Axis Place Holder")

Output the chart
c.makeChart(sys.argv[-1])
```
